New Features on 4-16x56 FFLT Rifle Scope

ZF 4-16x56 FFLT equipped with locking turret and zero stop

The ZF 4-16x56 has long been considered one of the best telescopic sights among snipers and marksmen. In close cooperation with international militaries, the developers of Carl Zeiss Optronics have now made it even better. "On a mission, decisions often have to be made in a fraction of a second," says Hans Ziegner, Head of the Security business unit. Snipers must be able to rely on their telescopic sights to fulfill their mission. The ZF 4-16x56 FFLT is now available with locking turrets – the elevation and azimuth turrets can only be adjusted after lifting the turret caps. This prevents users from unintentionally changing the configured ballistic correction of elevation. The zero stop is based on the operational experiences of military and security forces. On a tactical mission and at night, in particular, it is vital for the elevation turret to mechanically stop at zero. If the turret is set incorrectly, snipers can no longer hit their targets. The reticle on the ZF 4-16x56 FFLT is located in the first focal plane, a mission-tested configuration. This simplifies range estimation.

The ZF 4-16x56 FFLT is one of the redesigned products that will be on display at the 2012 SHOT Show in Las Vegas in January. Visit us at booth 13913. Anyone interested will have the opportunity to test the telescopic sight on 16 January 2012 during the Media Day at the Range.

Carl Zeiss Optronics GmbH is the defense and security division of Carl Zeiss AG. It offers optical and optronic equipment for all military capability categories such as intelligence & reconnaissance, command & control, survival & protection, mobility & maneuverability, and mission effectiveness.
