New Development of 6x36 Targeting Optics

Carl Zeiss develops targeting optics with particularly wide field of view

Based on the experiences of militaries around the globe, Carl Zeiss Optronics has developed new targeting optics tailored to the needs of its customers. Thanks to its wide field of view, the ZO 6x36 is far superior to other targeting optics. This is particularly beneficial for situational awareness. With a wide field of view little movements are required. Shooters can react more quickly and focus on their targets.

The ZO 6x36 also features a compact design and a low weight of just 697 grams. Thanks to its ultra-short configuration, it can be used with a night sight attachment without requiring an extra long Picatinny rail. It also features an illuminated reticle. Because the ZO 6x36 is equipped with six brightness levels for daytime use and three levels for nighttime operations, it can be easily used with night sight goggles. The reticle can be flexibly selected based on the needs of the user.

The ZO 6x36 is one of the new optical highlights that will be on display at the SHOT Show in Las Vegas in January 2012. Visit us at booth 13913. Anyone interested will have the opportunity to test the targeting optics on 16 January 2012 during the *Media Day at the Range*.

Carl Zeiss Optronics GmbH is the defense and security division of Carl Zeiss AG. It offers optical and optronic equipment for all military capability categories such as intelligence & reconnaissance, command & control, survival & protection, mobility & maneuverability, and mission effectiveness.
