## Spotter 45 – Proven Optics with New Features

### Carl Zeiss Optronics expands its range of spotting scopes

The experiences of US special forces around the world have resulted in demands that are rarely met by spotting scopes currently available. Carl Zeiss Optronics has largely implemented these requirements in the new Spotter 45. These include a new 15-45x magnification range. The modified version of the Spotter 60 comes standard with the Horus 32 reticle which is very popular in the USA. The Spotter 45 features a sand-colored rubber cover. The outstanding optical properties known from the Spotter 60 have been retained.

The Spotter 45 is one of the new optical highlights that will be on display at the SHOT Show in Las Vegas in January 2012. Visit us at booth 13913. Anyone interested will have the opportunity to test the spotting scope on 16 January 2012 during the *Media Day at the Range*.

Carl Zeiss Optronics GmbH is the defense and security division of Carl Zeiss AG. It offers optical and optronic equipment for all military capability categories such as intelligence & reconnaissance, command & control, survival & protection, mobility & maneuverability, and mission effectiveness.
